Hospital, Taipei, Taiwan

OBJECTIVES

- To provide the basic knowledge required for clinical applications
- To describe all the basic principles (instruments, materials, anesthesia equipment) and present the most widely used robotic urological techniques
- To provide hands-on training sessions to learn or improve performance of basic technical tasks in robotic urological surgery
- To describe results and potential complications of robotic procedures

EDUCATIONAL METHODS

- Interactive theoretical sessions between faculty and course participants
- Pre-recorded operative demonstrations
- Hands-on session in robotic urological surgery training on porcine model under expert tutorial
